## Facts about Kennedy's Disease

*Every few days, a baby boy is born with this DNA defect.*

The defect makes testosterone almost a poison to his body. Since there is no treatment or cure, he will grow up not knowing when the disease will begin to attack his motor neurons and muscles. Often it begins with painful cramping and uncontrollable muscle spasms. Over time, motor neurons die and muscles waste away. Eventually, he will most likely require a wheelchair.

Unfortunately, because KD is a rare disorder, those affected - or who will be affected - are below the radar for medical research. But, *thanks to your support*, progress is being made!

Recently, a Michigan State University study announced news about recovering motor function in men afflicted with KD. This is exciting because that means, for the first time, they have uncovered potential treatments to reverse the disease!

With your help, we can continue to donate to the research for a cure!
